

Living in harmony with beavers

Castor Canadensis

Tips and tricks to protect your shoreline.

Plant only indigenous species that
beavers do not like to consume.

Plant these trees and shrubs :

- Sweet gale (*Myrica gale*)
- Bog-rosemary (*Andromeda glaucophylla*)
- Bog Labrador Tea (*Ledum groenlandicum*)
- Sweet fern (*Comptonia peregrina*)
- Large flowered Spirea (*Spirea grandifolia*)
- Juniper (*Larix laricina*)
- Cedar (*Thuja occidentalis*)
- Eastern hemlock (*Tsuga canadensis*)
- Balsam fir (*Abies balsamea*)
- Spruce sp. (*Picea* sp.)
- Pine sp. (*Pinus* sp.)
- Canadian yew (*Taxus canadensis*)

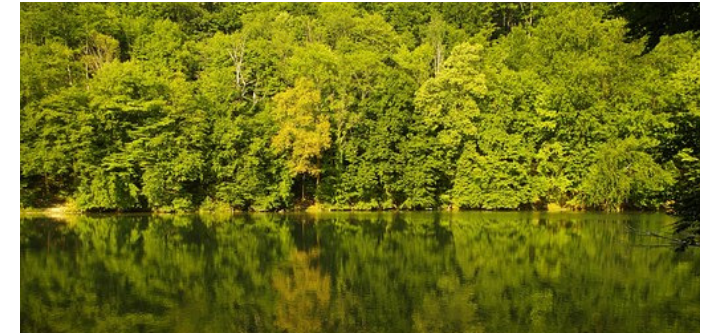

Avoid planting these trees and shrubs:

- Quaking aspen (*Populus tremuloides*)
- Willow sp. (*Salix* sp.)
- Alder sp. (*Alnus* sp.)
- Roses, cherries, dogwood, serviceberry, rowan, etc. (fruit shrubs)

Tips and tricks to protect your vegetation!

Add vegetation to your shoreline

By adding vegetation to your shoreline you make the beavers' access points less inviting and harder to navigate. The beaver will have to work harder to slide tree trucks through brush than on a groomed lawn.

Install wire mesh around your trees

Install galvanized metal wire mesh (max. 5 cm mesh size). The wire mesh should be at least 1 meter high to prevent beavers from damaging your tree above your fencing.
